Bob,

Regarding the Area A LNAPL recovery well placement/spacing, We feel that things should be fine the way they are presented in the plans. A pilot study such as this is to evaluate placement/spacing, and it may be assessed that the spacing has to be adjusted, based upon the obtained data.

At the next conference call, subsequent face-to-face and future monthly meetings, I would like Tom Mroz to discuss, enlighten and school us on the lessons learned from the MPE work that has been done on the Premcor facility. There may be a real opportunity to learn.

Lastly, we suggest that once testing is completed, the system should continue to be operated (if product is being recovered) during the evaluation period. Product needs to be recovered, and it does not make sense to shut down an active system recovering product. If winterization considerations need to be made, this should be done during the pilot testing period and implemented as needed to continue operating the system once pilot testing is completed.

Subject: HWG - LNAPL Area A Well Locations/Plan Review

Kevin/Steve,

As discussed in our meetings last week, we agreed that I would send a reminder email to you about your thoughts on the LNAPL Area A plans if I hadn't heard anything from you by the end of last week.

We are currently planning to start the drilling activities next week, and would really like your input, if any, on at least the well configuration part in the next day or so.

Please let me know if you have any questions.

Thanks,

Bob Veenstra
